

TECHNICAL MEMORANDUM

Stanislaus Regional Water Authority Surface Water Supply Project Extended Source Water Monitoring Plan

Date: March 15, 2018

To: Stanislaus Regional Water Authority Technical Advisory Committee

From: Elaine Howe, P.E. (Trussell Technologies)
Emily Owens-Bennett, P.E. (Trussell Technologies)

Subject: **Proposed Phase 2 Extended Monitoring Program for SRWA**

1 - INTRODUCTION

The Stanislaus Regional Water Authority (SRWA) has completed the first year (Phase 1) of Tuolumne River sample collection and analysis for characterization of source water for its Surface Water Supply Project (Project). The Phase 1 collection started in October 2016 and concluded in October 2017, with the exception of the required Long-Term 2 Enhanced Surface Water Treatment Rule (LT2) Bin classification parameters which are to be monitored for 24 months. The purpose of the Phase 1 monitoring program was to characterize the water quality of the source water to facilitate process train selection and design criteria selection for the new WTP, and to meet source water monitoring requirements for a new domestic water supply permit. The Phase 1 monitoring program included the following constituents:

- General water characterization parameters
- Title 22 contaminants (organics, inorganics, radionuclides, and DBPs)
- Microbial parameters
- Pesticides and other Synthetic Organic Chemicals (SOCs)
- Additional unregulated constituents

The sample collection schedule, monitoring location and sampling procedures for Phase 1 were discussed in the *Source Water Characterization Sampling Plan for the SRWA Surface Water Supply Project* Technical Memorandum (Trussell Technologies, September 2016), which was submitted to and approved by the California State Resources Water Quality Control Board's Division of Drinking Water (DDW). All water samples were collected by FishBio, who also measured temperature, pH, turbidity, dissolved oxygen, and conductivity in the field at the time of sample collection. All laboratory analyses were performed by Eurofins Eaton Analytical Laboratory (Eurofins), in Pasadena, California.

In order to better understand seasonal trends in water quality which can influence design criteria for SRWA's planned surface water treatment plant (WTP), a scaled down sampling program is proposed for Phase 2, defined as the time between the approval of this plan and the start of construction of the new SRWA WTP. In addition to continued source water characterization, this Phase 2 Extended Source Water Monitoring Plan is expected to fulfill the required Source Water Quality Analysis component of the domestic water supply permit application for the new WTP, contingent upon DDW approval. To fulfill the Source Water Quality Analysis component of the permit application, DDW may require an updated summary report from the monitoring program be submitted to present any changes in source water quality that may have been observed since the completion of the Phase 1 program.

2 - PROPOSED EXTENDED MONITORING PLAN AND SCHEDULE

An overview of the Phase 2 Extended Monitoring Program is provided below in Table 1. The select parameters required for 24 months of monitoring under LT2—*Cryptosporidium*, *E. coli*, and turbidity—will continue through October 2018 when the 24 months of sample collection are complete. Additional monitoring categories proposed for Phase 2 include the following:

- General water quality parameters with significant treatment process design implications (e.g., pH, turbidity, iron, manganese, etc.)
- Parameters with a Title 22 primary or secondary maximum contaminant level
- Microbial parameters that may impact the required level of treatment
- USEPA's fourth Unregulated Contaminant Monitoring Rule (UCMR4) parameters

The UCMR4 list includes 10 cyanotoxins that were monitored separately during Phase 1, as well as two metals, eight pesticides and one pesticide manufacturing byproduct, additional disinfection byproducts, alcohols, semivolatile chemicals, and two indicator parameters (TOC and bromide) that have already been monitored in the source water. USEPA uses the UCMR to collect occurrence data for contaminants known or suspected to exist in source waters and which pose a human health risk. USEPA can require public water systems (PWS) to monitor for as many as 30 contaminants under the UCMR, and the monitoring list is reevaluated every 5 years.

Because monthly LT2 sample collection will continue through October 2018, collection of samples for the additional parameters listed in Table 1 will be collected concurrent with the LT2 samples, but at a reduced schedule from Phase 1 sampling. Once LT2 sampling concludes at the end of 2018, it is proposed that the list of monitored parameters be reduced to only those parameters that have potential for seasonal variability and influence design criteria, and those parameters with State and Federal regulatory limits.

A complete listing of parameters in each of the monitored categories is provided in Attachment A.

Table 1. Proposed Phase 2 Source Water Monitoring Schedule

Parameter	Frequency of Collection	
	Mar 2018 To Oct 2018	Jan 2019 To Start of Construction*
General Water Characteristics (Physical and Chemical)	semi-annual (Spring, Fall)	semi-annual (Winter, Summer)
Select Field and Other General Parameters:		
pH, Temperature, Dissolved Oxygen, Turbidity, Alkalinity, Iron, Manganese, TOC, DOC, UV-254	monthly **	semi-annual (Winter, Summer)
Turbidity (lab)	monthly **	semi-annual (Winter, Summer)
Inorganic chemicals with DDW MCLs	semi-annual (Spring, Fall)	semi-annual (Winter, Summer)
Organic chemicals with DDW MCLs (includes regulated pesticides)	semi-annual (Spring, Fall)	semi-annual (Winter, Summer)
Radionuclides with DDW MCLs	semi-annual (Spring, Fall)	semi-annual (Winter, Summer)
Microbial Parameters:		
Cryptosporidium, Giardia	monthly	--
Total Coliform, E. coli	monthly **	semi-annual (Winter, Summer)
Nitrogen Compounds (NH ₃ , NO ₂ , NO ₃)	semi-annual (Spring, Fall)	--
Select Unregulated Pesticides and SOCs ***	semi-annual (Spring, Fall)	--
Additional Unregulated Parameters with a DDW Notification Level	semi-annual (Spring, Fall)	--
UCMR4 Parameters	Summer, Fall	--

*It is anticipated that the long-term monitoring proposed for 2019 will continue until construction of the WTP begins at or before the start of 2020.

**Monthly monitoring for these parameters is already included for October 2017 – October 2018 as part of the Phase 1 monitoring per LT2.

***“Select Unregulated Pesticides and SOCs includes all high-use pesticides applied to crops within the Lower Tuolumne River watershed, plus constituents measured during prior sampling events, provided that an appropriate analytical method is available.

3 - BUDGET ESTIMATE

The total estimated sampling and analytical costs for the Phase 2 Extended Monitoring Program is \$38,412, as summarized in Table 2. It is assumed that sampling and analysis will continue to be conducted by FishBio and Eurofins, respectively, as subcontractors to West Yost Associates. Trussell Tech will continue coordination between FishBio and Eurofins, as well as data compilation and analysis, and summary report preparation.

Table 2. Estimated Phase 2 Extended Monitoring Program Costs

Service (Provider)	Phase 2 Monitoring Costs*		
	March-October 2018	2019	Total
Sample Collection (FishBio)	-	\$2,012	\$2,012
Laboratory Analysis (Eurofins)	\$23,227	\$8,605	\$31,832
Total Costs	\$23,227	\$10,617	\$33,844

*Includes 5% contingency on each quote from FishBio and Eurofins, plus 10% markup to West Yost.

FishBio will continue to support the project with sample collection and field water quality measurements for the Phase 2 Extended Monitoring Program. The existing Phase 1 contract with FishBio continues through October 2018 to complete the Phase 1 LT2 sampling and FishBio has determined that the additional sampling (Table 1, March–October 2018 monitoring parameters) under Phase 2 can be collected with no additional charge. Beyond October 2018, the second year of Phase 2 monitoring will proceed until the start of construction of the new SRWA WTP—expected by the beginning of 2020. The estimated fee for FishBio sampling services through December 2019 (current anticipated start of WTP construction) is **\$2,013**. This cost includes water quality analysis for the field parameters (i.e., temperature, pH, turbidity, dissolved oxygen, conductivity) at the time of sample collection.

Eurofins will provide courier service from FishBio's offices in Oakdale, California, as well as laboratory analytical services for Phase 2. The projected analytical fees for Phase 2 include \$27,795 for the additional monitoring through October 2018, then \$8,605 to cover the period of January through December 2019. The total Phase 2 budget for analytical services from Eurofins through December 2019 would be **\$36,400**.

Attachment A - Detailed List of Parameters for Phase 2 Extended Monitoring Program

Table A.1 – Phase 2 Extended Monitoring Through October 2018
